

Protocol on the health examination of a stallion

1.	Owner				
2.	Horse name:	born			
3.	Registration number:	Microchip number:			
		Abzeichen verglichen			
4.	Color:	Sire: / dam's sire:			
5.	Earlier Diseases/Surgeries	0 none 0 yes			0 Declaration of owner received
	Medications in the last 6 Weeks				
6.	Vaccination protection registered in the horse passport	0 Influenza	0 Herpes	0 Tetanus	0 Others:
7.	Witness to the inspection				

Health examination

8.	Care and nutritional condition	without any significant results			/ specific findings:
9.	Skin and scars (e.g.: Op-scars, Umbilical hernia, etc.)	without any significant results			/ specific findings:
10.	Head-, neck-, torso area, back adpectoral and palpatory	without any significant results			/ specific findings:
11.	Incisor teeth	without any significant results			/ specific findings:
	Overbite (less than 50% in rubbing (in physiological head position)	no			/ specific findings:
12.	Eyes (darkened room)	without any significant results			/ specific findings:
13.	Testis <u>consistency</u>				
	right	0 impact-elastic	0 soft		
	left	0 impact-elastic	0 soft		
	<u>Size</u>				
	right	0 goose egg	0 duck egg	0 chicken egg	0 smaller than chicken egg
	left	0 goose egg	0 duck egg	0 chicken egg	0 smaller than chicken egg
	Specifics				
14.	Preputium, Scrotum	without any significant results			/ specific findings:
15.	Circulatory system and Respiratory system at reat (incl. auscultation)	without any significant results			/ specific findings:
16.	spontaneous cough	0 not present	0 existing		

Horse registration number

17.	Adspection and palpation of the limbs	Front L: Back L:	Front R: Back R:
18.	Position, hoof, hoof shape	without any significant results / specific findings:	
19.	Hoof shoeing	0 none 0 Front 0 Back	
Specifics			
20.	Judging on hand at walk and trot hand on the straight on hard surface	without any significant results / specific findings:	
20a.	Trotting on the circle on soft and firm ground on both hands	without any significant results / specific findings:	
20b.	Backward straightening	without any significant results / specific findings:	
20c.	narrow turns	without any significant results / specific findings:	
21.	Neurological disorders: Hints for Ataxia, Shivering syndrom	0 no 0 yes	
22.	Testing under load until the onset of intensive breathing	without any significant results / specific findings:	
23.	Breath sound, during and after load	0 no 0 inspiratory 0 expiratory	
23a.	Laryngoscopy under sedation (mandatory in the case of existing breath sound) Larynx (Movement of the stellate cartilages) 2. Laryngoscopy on - / -	0 synchronous with complete abduction of the stellate cartilages 0 asynchronous with complete abduction of the stellate cartilages 0 asynchronous with <u>incomplete</u> abduction of the stellate cartilages Other results: Results:	
24.	Auscultation of heart and lungs after load	without any significant results / specific findings:	
25.	Blood sampling for EVA testing:		
26.	Further testing: Test for WFFS:		
27.	Follow up necessary	0 no 0 yes because of	
28.	Based on the clinical examination that I have performed, there are no concerns from a veterinary point of view regarding the participation of the stallion in the licensing/auction. The stallion does not show any clinical signs that indicate the existence of a contagious disease or give rise to fear of an outbreak of such a disease. No equine transmissible diseases have been officially detected in the animal's herd of origin in the 40 days prior to shipment. The stallion meets the developmental requirements for participation in the event. O yes / O no		
With these results the stallion		O is admitted O not admitted to the licensing
